

Enhance your product offering and gain a competitive edge

By partnering with us, you can integrate top-tier cyber defence solutions into your existing and future product hardware.

Why us?

We know that competition is fierce. Offer your operator customers a **value-added service** that's not just an add-on, but a significant **differentiator**. Our AI-powered solution is designed to enhance your current hardware deployments and future-proof your product roadmap. Together, we can transform the way cybersecurity is delivered and perceived.

Let's power progress

Partnering with us enables you to grow your business with access to the latest AI innovations. Adding software to your offering enhances your value proposition and provides more value to your customers, boosting customer retention, lifetime customer value and most importantly, makes you more competitive and distinctive in an ever-evolving cyber landscape.

Deep data insights

Grasp the intricacies of the data you manage with actionable analytics

Increase ARPU

With better quality of experience and rapid threat response

Old hardware?

No problem - our solution works effectively on older and modern routers

Ready to elevate your value-added proposition?

Gain a strategic ally in the ever-evolving world of cybersecurity. Let's combine our strengths to deliver unparalleled value to your customers and pave the way for a safer, more secure digital future.

Discover how our partnership can redefine your business.

Case study:

A seamless integration with an award-winning global router manufacturer

The challenge

As a leading global provider of home connectivity and telehealth monitoring solutions for ISPs, home users and SMB, this manufacturer wanted to gain a competitive edge. Unsure how to incorporate advanced cybersecurity into their product lines, their goal was to provide a future-proof platform for deploying advanced services and applications, offering their customers value-added upgraded security features.

Our solution

- Small footprint and minimal resource usage
- Operates on low and high powered hardware
- Additional 'out of the box' cyber services and data intelligence to your customers
- Partner for additional revenue streams for the hardware vendor
- No requirement for physical updates

Self-learning network

Capable of handling billions of devices

AI-powered insights

Real-time threat neutralisation and predictive maintenance to minimise downtime

Enterprise-level home and business network security

Protects any device connected to the router

“BlackDice's AI technology has transformed our routers into secure platforms for both home and business use. The superior cybersecurity and threat detection, combined with advanced device data intelligence is a key step towards realising our vision of creating a more connected, safer digital world”. - CEO, global hardware vendor
