

We're powering cyber defence for telecom operators - fuelled by AI

We help you deliver a value-added, data-driven cybersecurity service to your residential consumer and small-to-medium business (SMB) subscribers.

Why us?

Our **AI-powered** solution helps you enhance your offering with **enterprise-grade cybersecurity** as a value-added service. Combined with our data intelligence platform, **BlackDice Retina**, we secure all devices on your network and boost efficiency with smart, actionable insights. Partner with us to offer **robust cyber defence** that not only helps you stand out in a competitive market, increases revenue and reduces churn - but also **solidifies customer loyalty** and **improves your QoE metrics**.

Deep data insights

Grasp the intricacies of the data you manage with advanced data intelligence actionable analytics

Enhance QoE

AI-powered insights for rapid threat response - enhancing customer loyalty, reducing churn, and increasing ARPU

OpeX, not Capex

No heavy upfront costs, delivers the most robust, cost-effective and agile digital safety

Rapid, hassle free

Easy integration with existing infrastructures, ensuring minimal disruption, high scalability and maximum efficiency - in as little as 8 weeks

Scalable

Tailor-made for growth. Pay for what you need, scale as you grow, and enjoy the freedom of a security solution that adapts to your journey

Future-proof

Future-ready scalability, evolving seamlessly with your expanding roadmap and enhancing current deployments

Ready to elevate your value-added proposition?

Our technology is designed to meet the unique challenges you face across the entire digital ecosystem, ensuring robust protection for your subscribers on **any device, any network, anywhere**.

Contact us to learn how we can transform your network's security and deliver peace of mind to your subscribers.

Case study:

How we helped a premier European telecom provider to reach new markets

The challenge

As a premier private internet service provider (ISP), they faced a challenge: how to distinguish their offerings to reach new markets and attract more subscribers? With an aim to achieve substantial customer-base coverage in six months from deployment, they needed effective market differentiation to better serve both current and new subscribers (residential consumers and SMBs).

Our solution

- Developed a ready-to-deploy product focused on total device protection with real-time defence against digital threats
- Collaborated on the product's Go-To-Market strategy and rollout plan targeting both new and existing customers
- Integrated a white-label solution into existing router hardware
- For end users, an intuitive mobile app to empower them with complete network visibility and control, with features like device management and instant internet pause functionality

Self-learning network

Capable of handling billions of devices

AI-powered insights

Real-time threat neutralisation, no downtime

Tailored for families and SMBs

WiFi scheduling promotes balanced screen time, while SMBs benefit from robust data breach protection and network optimisation

“With BlackDice’s AI successfully integrated into our network infrastructure, it’s proving to be extremely reliable for delivering enterprise-grade cybersecurity services to our residential and SMB subscribers. Combined with our broadband technology, we can now better serve our subscribers and reach new markets - ensuring continuous connectivity and peace of mind”. CEO, European ISP
